

Resistance Decade Box

Resistance Resolution 1Ω , Absolute Maximum Resistance Measurement $11.111M\Omega$

Brand: Roborealm

Model: RDB7

Country of Origin: UK

Product Details

Roborealm Decade Resistance Box

The Roborealm Decade Resistance Box with a metal film resistor offering typical accuracy of 0.5% and a temperature coefficient of ± 50 ppm/ $^{\circ}C$.

It can be adjustable via a rotary control. This is a robust metal case epoxy finish, easy to install and has robust switches with metal frame and gold-plated contact.

Features and Benefits

- Seven decades are 1ohm, 10ohms, 100ohms, 1kohms, 10kohms, 100kohms, 1Mohms and 10Mohms
- Outputs on each decade via 4mm safety sockets
- Resistance resolution is 1ohm
- Maximum resistance measurement is 11.111 Mohms
- Maximum power rating is 0.5W
- Screen outputs (front panel and case) on safety earth socket
- Good long-term stability

Certifications
